

Contents

	Preface	<i>xi</i>
1	The R-Package, Sampling Procedures, and Random Variables	1
1.1	Introduction	<i>1</i>
1.2	The Statistical Software Package R	<i>1</i>
1.3	Sampling Procedures and Random Variables	<i>4</i>
	References	<i>10</i>
2	Point Estimation	11
2.1	Introduction	<i>11</i>
2.2	Estimating Location Parameters	<i>12</i>
2.2.1	Maximum Likelihood Estimation of Location Parameters	<i>17</i>
2.2.2	Estimating Expectations from Censored Samples and Truncated Distributions	<i>20</i>
2.2.3	Estimating Location Parameters of Finite Populations	<i>23</i>
2.3	Estimating Scale Parameters	<i>24</i>
2.4	Estimating Higher Moments	<i>27</i>
2.5	Contingency Tables	<i>29</i>
2.5.1	Models of Two-Dimensional Contingency Tables	<i>29</i>
2.5.1.1	Model I	<i>29</i>
2.5.1.2	Model II	<i>29</i>
2.5.1.3	Model III	<i>30</i>
2.5.2	Association Coefficients for 2×2 Tables	<i>30</i>
	References	<i>38</i>
3	Testing Hypotheses – One- and Two-Sample Problems	39
3.1	Introduction	<i>39</i>
3.2	The One-Sample Problem	<i>41</i>
3.2.1	Tests on an Expectation	<i>41</i>
3.2.1.1	Testing the Hypothesis on the Expectation of a Normal Distribution with Known Variance	<i>41</i>
3.2.1.2	Testing the Hypothesis on the Expectation of a Normal Distribution with Unknown Variance	<i>47</i>
3.2.2	Test on the Median	<i>51</i>
3.2.3	Test on the Variance of a Normal Distribution	<i>54</i>

3.2.4	Test on a Probability	56
3.2.5	Paired Comparisons	57
3.2.6	Sequential Tests	59
3.3	The Two-Sample Problem	63
3.3.1	Tests on Two Expectations	63
3.3.1.1	The Two-Sample t -Test	63
3.3.1.2	The Welch Test	66
3.3.1.3	The Wilcoxon Rank Sum Test	70
3.3.1.4	Definition of Robustness and Results of Comparing Tests by Simulation	72
3.3.1.5	Sequential Two-Sample Tests	74
3.3.2	Test on Two Medians	76
3.3.2.1	Rationale	77
3.3.3	Test on Two Probabilities	78
3.3.4	Tests on Two Variances	79
	References	81
4	Confidence Estimations – One- and Two-Sample Problems	83
4.1	Introduction	83
4.2	The One-Sample Case	84
4.2.1	A Confidence Interval for the Expectation of a Normal Distribution	84
4.2.2	A Confidence Interval for the Variance of a Normal Distribution	91
4.2.3	A Confidence Interval for a Probability	93
4.3	The Two-Sample Case	96
4.3.1	A Confidence Interval for the Difference of Two Expectations – Equal Variances	96
4.3.2	A Confidence Interval for the Difference of Two Expectations – Unequal Variances	98
4.3.3	A Confidence Interval for the Difference of Two Probabilities	100
	References	104
5	Analysis of Variance (ANOVA) – Fixed Effects Models	105
5.1	Introduction	105
5.1.1	Remarks about Program Packages	106
5.2	Planning the Size of an Experiment	106
5.3	One-Way Analysis of Variance	108
5.3.1	Analysing Observations	109
5.3.2	Determination of the Size of an Experiment	112
5.4	Two-Way Analysis of Variance	115
5.4.1	Cross-Classification ($A \times B$)	115
5.4.1.1	Parameter Estimation	117
5.4.1.2	Testing Hypotheses	119
5.4.2	Nested Classification ($A > B$)	131
5.5	Three-Way Classification	134
5.5.1	Complete Cross-Classification ($A \times B \times C$)	135
5.5.2	Nested Classification ($C < B < A$)	144
5.5.3	Mixed Classifications	147

5.5.3.1	Cross-Classification between Two Factors where One of Them Is Sub-Ordinated to a Third Factor ($(B < A) \times C$)	148
5.5.3.2	Cross-Classification of Two Factors, in which a Third Factor is Nested ($C < (A \times B)$)	153
	References	157
6	Analysis of Variance – Models with Random Effects	159
6.1	Introduction	159
6.2	One-Way Classification	159
6.2.1	Estimation of the Variance Components	160
6.2.1.1	ANOVA Method	160
6.2.1.2	Maximum Likelihood Method	164
6.2.1.3	REML – Estimation	166
6.2.2	Tests of Hypotheses and Confidence Intervals	169
6.2.3	Expectation and Variances of the ANOVA Estimators	174
6.3	Two-Way Classification	176
6.3.1	Two-Way Cross Classification	176
6.3.2	Two-Way Nested Classification	182
6.4	Three-Way Classification	186
6.4.1	Three-Way Cross-Classification with Equal Sub-Class Numbers	186
6.4.2	Three-Way Nested Classification	192
6.4.3	Three-Way Mixed Classifications	195
6.4.3.1	Cross-Classification Between Two Factors Where One of Them is Sub-Ordinated to a Third Factor ($(B < A) \times C$)	195
6.4.3.2	Cross-Classification of Two Factors in Which a Third Factor is Nested ($C < (A \times B)$)	197
	References	199
7	Analysis of Variance – Mixed Models	201
7.1	Introduction	201
7.2	Two-Way Classification	201
7.2.1	Balanced Two-Way Cross-Classification	201
7.2.2	Two-Way Nested Classification	214
7.3	Three-Way Layout	223
7.3.1	Three-Way Analysis of Variance – Cross-Classification $A \times B \times C$	223
7.3.2	Three-Way Analysis of Variance – Nested Classification $A > B > C$	230
7.3.2.1	Three-Way Analysis of Variance – Nested Classification – Model III – Balanced Case	230
7.3.2.2	Three-Way Analysis of Variance – Nested Classification – Model IV – Balanced Case	232
7.3.2.3	Three-Way Analysis of Variance – Nested Classification – Model V – Balanced Case	234
7.3.2.4	Three-Way Analysis of Variance – Nested Classification – Model VI – Balanced Case	236
7.3.2.5	Three-Way Analysis of Variance – Nested Classification – Model VII – Balanced Case	237

7.3.2.6	Three-Way Analysis of Variance – Nested Classification – Model VIII – Balanced Case	238
7.3.3	Three-Way Analysis of Variance – Mixed Classification – $(A \times B) > C$	239
7.3.3.1	Three-Way Analysis of Variance – Mixed Classification – $(A \times B) > C$ Model III	239
7.3.3.2	Three-Way Analysis of Variance – Mixed Classification – $(A \times B) > C$ Model IV	242
7.3.3.3	Three-Way Analysis of Variance – Mixed Classification – $(A \times B) > C$ Model V	243
7.3.3.4	Three-Way Analysis of Variance – Mixed Classification – $(A \times B) > C$ Model VI	245
7.3.4	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$	247
7.3.4.1	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ Model III	247
7.3.4.2	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ Model IV	249
7.3.4.3	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ Model V	251
7.3.4.4	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ Model VI	253
7.3.4.5	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ model VII	254
7.3.4.6	Three-Way Analysis of Variance – Mixed Classification – $(A > B) \times C$ Model VIII	255
	References	256
8	Regression Analysis	257
8.1	Introduction	257
8.2	Regression with Non-Random Regressors – Model I of Regression	262
8.2.1	Linear and Quasilinear Regression	262
8.2.1.1	Parameter Estimation	263
8.2.1.2	Confidence Intervals and Hypotheses Testing	274
8.2.2	Intrinsically Non-Linear Regression	282
8.2.2.1	The Asymptotic Distribution of the Least Squares Estimators	283
8.2.2.2	The Michaelis–Menten Regression	285
8.2.2.3	Exponential Regression	290
8.2.2.4	The Logistic Regression	298
8.2.2.5	The Bertalanffy Function	306
8.2.2.6	The Gompertz Function	312
8.2.3	Optimal Experimental Designs	315
8.2.3.1	Simple Linear and Quasilinear Regression	316
8.2.3.2	Intrinsically Non-linear Regression	317
8.2.3.3	The Michaelis-Menten Regression	319
8.2.3.4	Exponential Regression	319
8.2.3.5	The Logistic Regression	320
8.2.3.6	The Bertalanffy Function	321
8.2.3.7	The Gompertz Function	321

8.3	Models with Random Regressors	322
8.3.1	The Simple Linear Case	322
8.3.2	The Multiple Linear Case and the Quasilinear Case	330
8.3.2.1	Hypotheses Testing - General	333
8.3.2.2	Confidence Estimation	333
8.3.3	The Allometric Model	334
8.3.4	Experimental Designs	335

9	Analysis of Covariance (ANCOVA)	339
9.1	Introduction	339
9.2	Completely Randomised Design with Covariate	340
9.2.1	Balanced Completely Randomised Design	340
9.2.2	Unbalanced Completely Randomised Design	350
9.3	Randomised Complete Block Design with Covariate	358
9.4	Concluding Remarks	365
	References	366
10	Multiple Decision Problems	367
10.1	Introduction	367
10.2	Selection Procedures	367
10.2.1	The Indifference Zone Formulation for Selecting Expectations	368
10.2.1.1	Indifference Zone Selection, σ^2 Known	368
10.2.1.2	Indifference Zone Selection, σ^2 Unknown	371
10.3	The Subset Selection Procedure for Expectations	371
10.4	Optimal Combination of the Indifference Zone and the Subset Selection Procedure	372
10.5	Selection of the Normal Distribution with the Smallest Variance	375
10.6	Multiple Comparisons	375
10.6.1	The Solution of MC Problem 10.1	377
10.6.1.1	The F -test for MC Problem 10.1	377
10.6.1.2	Scheffé's Method for MC Problem 10.1	378
10.6.1.3	Bonferroni's Method for MC Problem 10.1	379
10.6.1.4	Tukey's Method for MC Problem 10.1 for $n_i = n$	382
10.6.1.5	Generalised Tukey's Method for MC Problem 10.1 for $n_i \neq n$	383
10.6.2	The Solution of MC Problem 10.2 – the Multiple t-Test	384
10.6.3	The Solution of MC Problem 10.3 – Pairwise and Simultaneous Comparisons with a Control	385
10.6.3.1	Pairwise Comparisons – The Multiple t-Test	385
10.6.3.2	Simultaneous Comparisons – The Dunnett Method	387
